# INTRODUCTION TO OUR CITY

The Lincoln City Profile's purpose is to provide a wide range of information focused on the key demographics and characteristics of the city. It is a valuable source of summary information all contained in one document, which is also available in its individual chapters if required. The profile collates information from across a range of measures from a wide range of different sources focusing on the most recent data available. The chapters include Population, Economy, Welfare, Crime, Education, Housing, Health and Environment & Climate, plus for this latest version an additional chapter on the impact of Covid 19 on the city.

2021 has been a difficult year as the country continues to recover from the Covid-19 pandemic. Some of the data sets sourced from national data and included in the new Lincoln City profile do not yet include any data from the pandemic period; some contain very early figures following the start of Covid-19 and only show the immediate impact of the pandemic, and there are a few data sets that are relatively up to date.

At this time, it is too early to use data to clearly predict the longer-term impacts on our city. This will be covered in future versions of the Lincoln City Profile, but we are starting with a look at the impact, using data that is currently available.

At the start of each chapter in the Lincoln City Profile, a paragraph has been included which highlights the key findings within the chapter impacting on the city. Below the introduction, charts have been provided presenting the latest data available for datasets contributing to the chapter, which has been drawn from a wide range of sources. A summary comment has also been provided under each chart to raise awareness of the key data findings presented.

To allow users of the Lincoln City Profile to easily access the very latest data available post publication of the Lincoln City Profile, together with historical data for each dataset presented, the source of each dataset has also been provided.

If you have any questions or comments concerning this profile, or require further information, please email us on - [policy@lincoln.gov.uk](mailto:policy@lincoln.gov.uk).

# OUR BENCHMARKING GROUPS

## CIPFA NEAREST NEIGHBOURS

Many of the measures in this profile use our nearest neighbours as defined by CIPFA (Chartered Institute of Public Finance and Accountancy) where Lincoln is compared with 15 other councils with the most similar statistical characteristics in terms of social and economic features. When used, this profile will refer to them as “our nearest neighbours”. A breakdown of the CIPFA group can be found in [Appendix 1, “Definitions”](#)

## POLICE ‘MOST SIMILAR GROUP’

In the same way CIPFA produces our ‘nearest neighbours’, the “Most Similar Group” is a group of geographies which Police.UK have identified as similar to each other. A breakdown of the “Most Similar Group” group can be found in [Appendix 1, “Definitions”](#)

## WARD BOUNDARIES – OCTOBER 2016

The data presented in this report is based on the most up to date ward boundaries for Lincoln. Figure 1 shows wards and lower super output areas for information.

# POPULATION

Please note that most of the data sets sourced from national data included in this new Lincoln City profile chapter do not yet include any data from the pandemic period; a few contain very early figures following the start of Covid-19, with just two sets containing current data for 2020/21.

This year's Population figures show several increases and static measures. As Population measures are contextual (i.e., difficult for the city to change), there are no "negatives" as you would find with other quantitative data.

## Lincoln has seen:

The figure has decreased from 1,327 in 2019/20, to 470 in 2020/21 – a decrease of 857. This decrease could also be seen throughout England. At this time, it is too early to determine whether this decrease is as a result of Brexit, the COVID-19 pandemic or a combination of both. Future data releases will continue to be monitored to help understand the reasons for this decrease.

# ECONOMY

Prior to the advent of the Covid-19 pandemic, Lincoln's economy was proving to be particularly buoyant and growing steadily, with most indicators showing improvement. This was also shown in the Lincoln Economic Evidence and Growth Study 2020 completed in support of the Town Investment Plan.

The data collected in the Economy chapter shows that salaries and wages were improving for both full and part time earners, which is a positive step towards improving health outcomes for those facing financial insecurity.

New businesses are being created and surviving – however this data reflects up to 2018 and will not yet include any of the negative effects on business felt during and after the pandemic.

## Lincoln has seen:

Model based unemployment rates use a statistical model to provide better estimates of unemployment due to very small sample sizes which may be unreliable.

**PERCENTAGE OF EMPLOYMENT BY OCCUPATION TYPE IN LINCOLN APRIL 2020 – MARCH 2021**

Figure 39

**Source – NOMIS 2021**

Figure 39 shows in the year 2020/21 skilled trades occupations occupied the majority of employment in Lincoln with a figure of 18.9% as opposed to professional occupations which was the lowest at 8.6%. Please note the values marked as 0.0% are not available due to the sample size being unreliable for this period. ‘Elementary Positions’ are those roles that don’t require prior training and are lower skilled. N.B. This data may be unreliable during this period as it is collected via survey and covers the period of the covid lockdowns.

**JOB DENSITY 2009-2019 (LINCOLN VS EAST MIDLANDS AND ENGLAND)**

Figure 40

Lincoln’s job density decreased slightly to 0.90 in 2019 as opposed to England and East Midlands who have both increased in 2019 but remain under the Lincoln density.

## **WELFARE**

Please note that most of the data sets sourced from national data included in this new Lincoln City profile chapter are reflecting data up to 2021, and thus have started to include data from the pandemic period; however, the poverty related data is earlier only reflecting 2019/20.

The data shows significant uplift of benefit claims in 2020, and although these are dropping in 2021 as people are able to resume work, they are still higher than previously – which seems to contradict the evidence in the Economy chapter relating to wages. However, it is important to note that this is due to the difference in timeframes between the two evidence bases.

### **Lincoln has seen:**

- An increase of people living in fuel poverty in 2019, rising to 15.4% from 11.0% in 2018
- The percentage of children living in (relative) low income families has risen by 1% to 21% in 2019/20, although the gap between Lincoln and the England rate remains at 2%
- The number of claimants of Universal Credit (both male and female) over the year August 19 to August 21 has increased significantly. This is likely to include the effects of Covid-19
- The number of council tax support claimants has increased to 8,982, a significant rise since April 2020 when the figure stood at 8524.

### **IMD 2019 Summary**

It's important to note that the IMD (Indices of Multiple Deprivation) figures are not a performance measure and are instead a collection of comparator figures against other local authorities across the country. The MHCLG (Ministry for Housing, Communities and Local Government) LA (local authority) rank for IMD 2019 shows Lincoln as 68th most deprived local authority area out of a total of 317.

The three domains that Lincoln has scored higher in the rankings (less deprived) are in crime, housing and living environment. These three areas have the least weighting on the overall IMD score. Health remains Lincoln's most deprived domain.

The same 10 LSOAs (Lower super output area) remain in the top 10% of most deprived areas in England as in 2015. One Birchwood LSOA (007C) has dropped out of the top 1% into the top 5%. In addition, one Park LSOA (006B) has dropped from the top 5% to the top 10%. The Moorland LSOA that remains in the top 1% has reduced from 207th most deprived area to the 309th most deprived. Seven of the ten LSOA's have improved their positions compared to England, three have declined – these are:

- Glebe 002C
- Castle 001A
- Minster 001D

Figure 48 shows between August 2020 and August 2021 the number of both males and females aged 16-17 claiming Universal Credit remained the same for males at 10 claimants and decreased by five claimants for females. Unemployment benefits normally only apply to people aged 18 years and over. They can only be claimed by 16 and 17 year olds in exceptional circumstances. Consequently, the counts for this age group are typically very low. The August 2020 statistic includes the first period of lockdown due to Covid-19.

# HEALTH

For health comparisons, we use our Nearest Neighbours as defined by CIPFA (Chartered Institute of Public Finance and Accountancy) where Lincoln is compared with 15 other councils with the most similar statistical characteristics in terms of social and economic features. These have been recently revised by CIPFA and Lincoln's new neighbours are defined on the "Our benchmarking Groups".

Please note that health statistics are often released on different frequencies and sometimes on periods covering two years. So in this section you will find data for periods from 2017-19 up to 2019-20,

As indicated earlier, there is a strong link between earnings and health – however, the health data sets are usually lagging those provided for earnings, so care needs to be taken when using the two together. In addition, it takes a long time for improvements seen in living standards to show through in the health statistics, as human bodies naturally take time to show improvements both physically and mentally from the environment, eating habits, and exercise results.

## **Progress 8 and Attainment 8**

As a response to the unprecedented impact of COVID, assessments planned for summer 2020 and summer 2021 were not able to go ahead as planned and alternative assessment arrangements were implemented.

Within the 2020 exam period, qualification awards were generated by Centre Assessed Grades (CAG's) which were awarded by the school based on expected student outcomes. For example, student predictions based on trend were not taken into account and grades were given based on a student's education not being affected.

For the 2021 exam series qualification awards were made by Teacher Assessed Grades (TAG's). Much of the same evidence was used for the CAG's and TAG's, but for the TAG's the grading was placed on what level a student was working at, based on what they had been taught, and not what a student would have achieved if COVID had not affected their learning.

As neither the 2020 and 2021 grades were awarded based on the standard examination criteria and with each school being able to use their own selection of assessment material using CAG and TAG, a government decision was made to not produce any performance data for schools.

Figure 25

Figure 143 shows the Air Quality Management Area (AQMA) for Lincoln in 2018. The area was amended in August 2018 due to improvements in nitrogen dioxide levels and consequently was made significantly smaller. The AQMA boundary will only ever be changed or revoked entirely if sufficient evidence is available to demonstrate that breaches of the national air quality objectives are unlikely in parts or all of the area covered by the AQMA.

## AUTOMATIC NO2 (NITROGEN OXIDE) MONITORING LOCATIONS AS OF 2018

Figure 264

Source – City of Lincoln Council 2021

Figure 144 shows the NO<sub>2</sub> nitrogen oxide monitoring sites in Lincoln as of 2018. In the 5 years up to and including 2019, all the long-term monitoring sites showed an improving trend. This trend continued in 2020 and into 2021. Some of the improvements seen in 2020 and 2021 will have been driven by the response to Covid-19 reducing the amount of traffic on the city centre roads. However, the degree to which these improvements are found to be temporary will only be seen as we gather more air quality data over the next couple of years.
